Jack Romo

University of York

jr1161@york.ac.uk

<https://github.com/jackromo>

We'll be using Python 3.6

Interpreted scripting language

Simple and readable

Part 1: Types, Operators, and Variables

Primitive Data Types 1

- Words and letters are strings (str)
 - 'egg' "spam"
- Numbers with a decimal point are floating point numbers (float)
 - 124.0 -0.123
- Numbers with no decimal point are integers (int)
 - 1 124 0 -5

Primitive Data Types 2

- Booleans give us logic
 - `True` `False`
 - Must be capitalized!
- Some things are nothing
 - `None`
 - Similar to “null” in Java.

DRAFT

Operators and Conditionals

- Arithmetic is nearly how you think (see exercises)
 - `1 + 1 - 4 * 3 / 2 ** 2`
- Booleans can be combined
 - `True and False` `True or False` `not False`
- Conditionals let us check for truth
 - `1 == 1` `1 > 1`

Variables

- Variables allow you to store values
 - `x = 5, y = "hey"`
- Python variables can hold anything
- Variables are mutable
 - `x = x + 1` (x becomes 1 greater than before)
 - `x += 1` (shorthand for above)

Course Website

All resources for this course are self-contained within:

<https://york.gjcampbell.co.uk/>

Part 2: If Statements and Lists

If Statements

- These are the most common control structure you will encounter

```
if foo == 3:  
    print('Variable foo was 3!')  
else:  
    print('Variable foo was NOT 3!')
```

Note: The else clause is optional.

Lists and Indexing

- Lists can hold several items, and remember their order
- Lists are zero-indexed

```
>>> ls = [1, 2, 'hello', 3.4]
>>> ls[0]
1
>>> ls[2]
'hello'
```

Note: Lists of length n have elements 0 through $n-1$.

Splicing Lists

- Python allows you to easily take part of a list

```
>>> ls = [1, 2, 'hello', 3.4]
>>> ls[1:3]
[2, 'hello']
>>> ls[0:4]
[1, 2, 'hello', 3.4]
>>> ls[0:4:2]
[1, 'hello']
>>> ls[::-1]
[3.4, 'hello', 2, 1]
```

Go write code!

Summary

- Today, we have looked at:
 - Primitive Data Types (Strings, Floats, Integers, Booleans)
 - Operators and Conditionals (+, -, /, *, **, ==, !=, >, <)
 - Variables and Mutability
 - If Statements
 - Lists and Indexing
 - Splicing Lists

Questions? Speak up now!

Thanks!
